PROFILE

I build complete systems end to end — front end, backend, API, database, deployment — and the AI automation that runs them without anyone touching a spreadsheet. Currently building enterprise ERP platforms across three industries: HVAC services, aesthetic healthcare and candle manufacturing. Comfortable owning the whole vertical rather than one layer of it, and I treat load time, render latency and redundant queries as bugs rather than polish.

EXPERIENCE

AI Engineer & Full Stack Developer — ProofEasy 2026 — Present

Enterprise ERP systems, schema through deployment, across three industries.

- Design and build full ERP platforms in Next.js, React, Node and PostgreSQL, plus a .NET stack where the client required it
- Own the whole vertical: database schema, API layer, front end and deployment
- Build AI-driven automation across n8n, Zapier and Make to remove recurring manual operations

Web Developer & Automation Expert — iTechNotion Pvt Ltd 2025 — 2026

Live client platforms in healthcare, wellness and email automation, plus the company's internal automation layer.

- Built and shipped features across the full stack on three production client platforms
- Wrote and consumed REST endpoints, webhooks and real-time notification flows
- Designed n8n workflows replacing recurring manual work across three departments
- Owned performance on both sides — load time, render latency and redundant API calls

AI/ML Intern — IBM SkillBuild May 2024

Fifteen-day intensive bootcamp on applied AI and machine learning.

- Built a functional chatbot on IBM Watson Assistant
- Hands-on with practical ML tooling and model workflows

TECHNICAL SKILLS

AI & Automation	n8n · Zapier · Make · LLM & API integration · Workflow architecture · GitHub Copilot · Claude Code
Backend & Data	Node.js · Express.js · PostgreSQL · REST API design · Auth & role-based access · Webhooks & integrations · .NET · Firebase
Frontend	React.js · Next.js · TypeScript · JavaScript (ES6+) · HTML5 · CSS3 · Astro.js
Deployment & Infra	Vercel · Netlify · Environment & secrets config · Cloudflare · CI/CD basics
Styling & Tooling	Tailwind CSS · SCSS · Bootstrap · Git & GitHub · VS Code · Figma · C / C++

PROJECTS

Adorn — Hospital Management ERP · Adorn Clinic, Ahmedabad · 2026 · in development

Two-branch hospital ERP covering appointments, patient records, a ten-bed inpatient ward and clinical support in one data model — so walk-in consultation flow and admitted-patient care are handled by the same system. Built across the whole stack, from the PostgreSQL schema through the API to the interface.

Next.js · React · Node.js · PostgreSQL

Sahaj Cooling & Electronics ERP · Sahaj Cooling, Ahmedabad · 2026 · in development

Full-surface ERP for an HVAC, refrigeration and electronics firm operating since 1969 across hospitals, automotive, retail and real estate. The brief was complete operational coverage rather than one department, replacing fragmented departmental tooling.

.NET · React · PostgreSQL

Awax Studio — Manufacturing ERP · Awax Studio · 2026 · in development

Manufacturing ERP for a scented-candle producer running three channels in parallel — order-driven retail, batch-driven wholesale and quote-driven custom production. Production, inventory and order flow are modelled to hold for all three rather than forcing one shape onto the others.

[Next.js](#) · [Node.js](#) · [PostgreSQL](#)

HR, Sales & Marketing Automation Suite · 2025 · internal

Seven connected n8n workflows forming an operational backbone rather than one tool: sheet-triggered estimates and invoices through Zoho Books, an HR inbox agent that classifies mail and replies to candidates with matching openings, job posts fanned out to email and social, probation reviews scheduled automatically, and HR documents generated from maintained templates.

[n8n](#) · [Zoho Books](#) · [Google Workspace APIs](#) · [Brevo](#)

Client platforms — Evolved Human Care, InboxPlus, Wellnessta · iTechNotion · 2025 · live

Telehealth consultation booking with real-time appointment state across doctor and patient; an email-automation platform whose drag-and-drop workflow canvas I rebuilt for lower UI latency on large graphs; and a spa booking platform stabilised end to end — crash fixes, a debounced search that cut API traffic substantially, and a reworked booking flow.

[React](#) · [REST APIs](#) · [Webhooks](#) · [Real-time](#) · [Performance](#)

EDUCATION

B.Tech, Information Technology — Gandhinagar Institute of Technology

2021 — 2025

Core: data structures, algorithms, OOP and database systems. Elective focus on web technologies and software development practice.
